

Listing and Amendments to the Claims

This listing of claims will replace the claims that were published in the PCT Application:

1. (currently amended) Method for searching a database on a disk storage medium,
~~characterized by comprising~~
 - execution of a first search step which is used to scan the entire database on the disk storage medium,
 - provision of an intermediate result from the first search step,
 - execution of a second search step in the intermediate result from the first search step, and
 - provision of an end result from the second search step.
2. (currently amended) Method according to Claim 1, ~~where~~ wherein the processing speed for the data in the first search step is at least as high as the read-in speed for the data.
3. (currently amended) Method according to Claim 1 ~~or 2, where~~ , wherein only a text search is performed in the first search step.
4. (currently amended) Method according to ~~one of the preceding claims, where~~ Claim 1, wherein the first search step involves skipping to search locations from an index list in descending or ascending order on the basis of sorting exclusively according to sector numbers.
5. (currently amended) Method according to ~~one of the preceding claims, where~~ Claim 1, wherein the intermediate result comprises one or more subresults which are respectively searched in the second search step.

6. (currently amended) Method according to ~~one of the preceding claims, where~~
Claim 1, wherein the database is dynamic and is available in fragmented form
and in this context the individual fragments are read in successively and a read
head skips exclusively in one direction between the fragments.
7. (currently amended) Method according to ~~one of the preceding claims, where~~
Claim 1, wherein the data are stored on the disk storage medium in ECC
blocks.
8. (currently amended) Method according to ~~one of the preceding claims, where~~
Claim 1, wherein the disk storage medium is an optical disk.
9. (currently amended) Apparatus for searching a database on a disk storage
medium,
~~characterized by comprising~~
 - a search device for executing a first search step which can be used to
scan the entire database on the disk storage medium, and
 - a memory device for storing and providing an intermediate result from
the first search step, where
 - the search device is also designed to execute a second search step in
the intermediate result from the first search step and to provide an end
result from the second search step.
10. (currently amended) Apparatus according to Claim 9, ~~where~~ wherein the
processing speed for the data in the search device in the first search step is at
least as high as the maximum or an instantaneous read-in speed for the data
into the search device.
11. (currently amended) Apparatus according to Claim 9 ~~or 10, where~~ , wherein
an exclusive text search can be performed in the search device during the first
search step.

12. (currently amended) Apparatus according to ~~one of Claims 9 to 11, where~~
Claim 9, wherein the first search step may involve the search device skipping
to search locations from an index list in descending or ascending order on the
basis of sorting exclusively according to sector numbers.
13. (currently amended) Apparatus according to ~~one of Claims 9 to 12, where~~
Claim 9, wherein the intermediate result which can be stored in the memory
device comprises one or more subresults which can be searched by the search
device in the second search step.
14. (currently amended) Apparatus according to ~~one of Claims 9 to 13, where~~
Claim 9, wherein the database is dynamic and is available in fragmented form
and in this context the individual fragments can be read into the search device
successively and a read head can skip exclusively in one direction between the
fragments.
15. (currently amended) Apparatus according to ~~one of Claims 9 to 14, where~~
Claim 9, wherein the search device and the memory device are suitable for
processing ECC blocks.
16. (currently amended) Apparatus according to ~~one of Claims 9 to 15, where~~
Claim 9, wherein the disk storage medium is an optical disk.
